

Near diffraction-limited flat-top beam shaping elements

Item Number: TH-REC-6-270x270urad-355

Input parameters	
Wavelength:	355 nm
Required beam diameter:	6 mm
Laser mode:	Single-mode
Collimation required or not:	This product was design for collimated incident beam.
Element position:	The element should be placed at the plane of beam waist.

Element Parameters	
Transimmissive or reflective:	Transmmissive
Material:	Fused silica
Dimension:	20 x 20 mm or Φ 25.4 mm
Thickness:	2 mm
Coated or not:	Optional

Output parameters	
Output shape:	Rectangular / Square
Full diffractive angle:	270 x 270 urad
Transition angle:	29 urad
Working distance and output beam size	The working distance is equal to the focal length. The output beam size is the product of working distance and full diffractive angle.
Efficiency:	~ 95%
Nonuniformity error:	~ 3%

Focusing lens required or not	
Focusing lens required or not	Yes
